

Getting the “no free licence module available.” message on PATGuard 3?

Regarding a network install of PATGuard 3 and no free licence module available.

This generally occurs when there are no available licences, for example if someone else is logged into the programme or if the pc did not shut down correctly.

Option 1: Try again later - in most cases you will be able to login once another user has logged out or shut down the pc and try again.

Option 2: Try using the licence utility (in the link below) to find the pc that is preventing the software from working and cancel this login.
