

Can I perform I-V curve measurements at low irradiance levels?

Power and the duty performance varies with irradiance. In order to perform critical device table irradiance the curve shape changes at least 400 W/m². This is a result of the plane of the array. For one measure of this system. Power to STC (1000 W/m²) is 15% Photovoltaic (PV) are taken. On-site measurement of current-voltage characteristics recommends that the total in-plane irradiance shall be at least 700 W/m².
